

【LOHAS Health Screening Package】 Examination Items

Categories	Content	Descriptions
General Physiological Assessment	Height, weight, blood pressure, body temperature, pulse, breathing, waist, body fat determination, body mass index (BMI), and peripheral oxygen saturation measurement.	Finding out the subject's vital signs, basic body functions, and ideal body weight range; screening for the cardiovascular diseases and the risk factors for metabolic syndrome; observing the tissue perfusion status and the oxygen-carrying capacity of the blood. The diet and exercise plan will according to the outcomes of these tests.
Physical Examination	Physical exam of auscultation, palpation, percussion, and history taking.	Examination of head and neck (physical appearances); palpation of the thyroid gland; auscultation of heart and lungs; palpation of abdomen; limb activity, and skin status. We will also provide proper medical advice to customers based on their medical histories or symptoms.
	Vision Test (including the digital non-mydratic ophthalmoscopy)	Vision test, intraocular pressure test, color blindness determination, and ophthalmoscopy.
Blood Routine	WBC、RBC、HB、HCT、MCV、MCH、MCHC、Platelet、DC	Check-up of blood cell counts and clotting function, screening of blood infection and morphology.
Urine Routine	Out Look、SpGr、PH、Protein、Glucose、Bilirubin、Ketone、Occult Blood、R.B.C、W.B.C、Pus Cells、Epithelial Cells	Screening of kidney function, urinary tract infection, diabetes etc.
Stool Routine Test	Occult Blood Microscopic Examination	To assess whether there is any bleeding, parasite infection, and so on in the digestive tract.
Biochemistry Examination	Plasma Glucose Tests: AC Sugar、HbA1C、Insulin	For detection of diabetes.
	Liver Function Tests: Total Protein、Albumin、Globulin、A/G ALK/P、Bilirubin-T、Bilirubin-D、GOT/GPT、r-GT、HBsAG、Anti-HBs、Anti-HCv	Check-up of liver function, and detection of B & C hepatitis.
	Renal Function Tests: BUN、Creatinine、eGFR、Uric Acid	Check-up of kidney function, detection of uremia, check-up of gout.
	Blood Lipid Exam: sdLDL、LDL、HDL、T-CHOL、TG、T-chol/HDL	Check-up of fat metabolism, detection of risk factor of heart disease.
	Thyroid Function Exam: Free T4、TSH	Check-up of thyroid function.
	Tumor Markers: AFP、CEA、CA199 (Male)PSA、(Female)CA125	Screening of cancer include: Liver, Large Bowel, Pancreas, (Male)Prostate, (Female)Ovary.
	The Inflammatory Index: Rheumatoid Arthritis Factors (RA)	To detect rheumatoid arthritis, tissue inflammation, and the aging level.

X-ray Examination	Chest X-ray (Chest) Notation: It is hard to discover abnormalities using X-ray when lesions are too small or overlapping with other tissues resulting in a blind spot. Low-dose computed tomography (LDCT) should be performed to detect lung cancer in the early stage.	This examination screens for diseases such as inflammation, fibrosis, cancers, pleural effusion, or abnormal expansion in organs such as lungs, trachea, heart, aorta, pleura, and mediastinum.
	Abdominal Examination (KUB)	This examination screens for lesions such as kidney stones, gallbladder lesions, ileus, soft tissue sarcoma, and bladder calculus.
	Lumbar Examination (L-Spine)	
Cardiovascular System	Electrocardiogram (EKG)	Screening of abnormal heart rhythms, cardiac conduction system, sizes of heart ventricles, myocardial anoxia, and so on.
Bone Density Test	DXA Bone Density Examination (The whole-body dual-energy X-ray absorptiometry)	DXA dual-energy bone density scanning has been approved by the World Health Organization (WHO). With the extremely low dose of radiation, this test effectively confirms an osteoporosis diagnosis and assesses the risk of bone fracture.
Endoscopic Examination	Gastroscopy (painless examination)	Check-up presence of ulcer, inflammation, and cancer of esophagus, stomach and duodenum.
	Helicobacter pylori testing (CLO test : rapid urease test) (CLO, Campylobacter-like organism test) ※Disposable biopsy forceps are used.	Performance of urease test during endoscopic exam by taking small pieces of gastric specimen.
	Colonoscopy (painless examination)	Check-up presence of colon cancer, polyps, inflammation, etc.
Ultrasound Examination	Color Echocardiography	The subject of inspection for heart enlargement (cardiomegaly) and thickening (hypertrophy), the systolic and diastolic functions, valves of regurgitation or prolapse, congenital heart defect, myocarditis, myocardial infarction, myocardial hypoxia, and so on.
	Abdominal Ultrasound	Check-up of liver, gallbladder, kidney, pancreas and spleen, screening of risk factor of tumor, cyst, calcification and calculus.
	Liver Fibrosis & Fatty Quantitative Analysis	One stop analysis combined with new ultrasound. It is fast, accurate, no liver slices, non-invasive and radiation-free. This assessment can digitally and quantitatively display the degree of liver fibrosis and fatty, which can be used as an objective basis for tracking and treatment effectiveness.
Special Examinations	Arteriosclerosis Detector	A pulse wave graph (PWG) will be used to analyze the changes in the vascular capacity, and calculate arterial stiffness to detect arterial stiffness in the early stage.
